

Certificate of Analysis

Customer Name: BIOCOTE on behalf of PHARMACELL /
PIVOTELL

Date Received: 22.12.2022

Date Analysed: 10.01.2023

Customer Contact: Rebecca Gill

Date Reported: 13.01.2023

Customer Email/Phone: rebecca.gill@biocote.com

Certificate Number: BL002/2023

Tick box if customer has provided untreated control samples for inclusion in testing ☐

Test Method: Determination of Antibacterial Activity using Test Based on MOD ISO 22196: 2011

BioLabTests Sample Reference Number			Contact Time*		Reduction against Initial	
	Sample	Test Bacteria	0 Hrs	24 Hrs	Log ₁₀	%
230/005	AUTOMATIC PILL DISPENSER. ABS WITH B65633 AT 1.5%	MRSA	3.11 x 10 ⁴	≤100	≥2.49	≥99.68%
		<i>E. coli</i>	4.99 x 10 ⁴	≤100	≥2.70	≥99.80%

*Numbers represent Colony Forming Units at representative contact times.

Data show the changes in size of the initial MRSA (ATCC® 43300™) and *E. coli* (ATCC® 8739™) populations due to their contact with the treated surface of the samples. The samples detailed in this CoA were tested for 24 hours (±1) at 35°C (±2) under a relative humidity of >90% as specified in the ISO 22196 method. The results detailed in this CoA relate only to the items tested. This certificate shall not be reproduced except in full, without written approval of BioLabTests.

Please note; samples were received in a ready to test state from the customer apart from sterilisation which is noted below.
All testing is performed on site at the BioLabTests address above unless otherwise disclosed.

Noted during testing	
	Note
No. of samples supplied per test:	6 of 6 supplied
Sample size:	Average size: 35 x 50mm
Sample sterilisation method:	65°C DRY HEAT FOR 1 HOUR
Film size:	Average size: 25 x 40mm
Inoculation volume:	Volume: 0.05ml
Initial bacterial concentration:	MRSA: 6.22×10^5 CFU/ml <i>E. coli</i> : 9.98×10^4 CFU/ml

The material of the cover slips is polyethylene with a thickness of 0.045mm.

Please note – For all information regarding deviations from ISO 22196:2011, please request statement B-Lab-State-007
